

APOLLO TYRES presents the **Commercial Vehicle Design Series**

CHIRON algae e-motion

A transport system that combines the road vehicle's flexibility with the environmental compatability of the railway. The engine used is an algae-powered fuel cell. Satellite tracking pairs are the ideal navigation with supplementary dimension railroad.

Street-rail combinationen with alternative engines like hub motor and an own tank that feeds the fuel cell – a bionic approach. Common features are combined for a new design modell that has been lined out very well.

Designed by Benjamin Cselley, Jupin Ghanbari, Jessica Covi, Erol Kursani, Universität für Angewandte Kunst Wien, Austria

You can count on us to carry the loads of tomorrow.
