

APOLLO TYRES presents the **Commercial Vehicle Design Series**

KING KONG

A new concept for trucks with an innovative chassis. Especially the subject mobility has to be pointed out in the context of commercial transport.

The essential feature of this truck is its transformation at any time from a closed box truck into a container carrier. The vehicle can either transport small goods up to 20 feet or freight in a container up to 40 feet. This metamorphosis requires no tools or special equipment. The turning circle of King Kong is much smaller than that of a conventional truck and therefore this truck can be used like a light shuttle even for narrow streets.

CLOSED TRUCK - Flexible roof for bulk cargo

Designed by
Xin Liu, Hochschule der Bildenden Künste Saar,
Saarbrücken, Germany

You can count on us to carry the loads of tomorrow.
