

Road to heaven, not hell!

Continuing our quest for making the roads a safer place for you, here are some more safety tips which might end up saving lives.

Another new gadget to distract you is the GPS system and the companies responsibly provide a message the instant you switch it on.

Distraction

A sudden phone call might stir up the driver who intends to pick it up instantly. This is more prone to happen whilst driving. So the next time your phone rings while you are at the wheel, let it ring till you have slowed down safely. Always remember to switch on the hazards as it will warn other road users.

Another major distraction is the music system. While you are scrambling to find out your favorite track, you have become unaware of the road ahead. So the best place to adjust your system is while waiting at a signal. Another new gadget to distract you is the GPS system and the companies responsibly provide a message the instant you switch it on. So instead listen to the voice and get going.

Instances like accidents also

While you are scrambling to find out your favorite track, you have become unaware of the road ahead. Avoid this at all cost.

Keep a strong vigil on the rear view mirrors. If anybody is trying to overtake, let him do it or stop him before by speeding.

take you off guard, as you are busy spotting what's happening, your car is on the move. So drive cautiously in such situations.

Passengers too are a major

source of distraction, especially if you have kids on board. Avoid getting into a debate while driving as you are then justifying this and your brain is completely

devoted to this. Avoid driving with a kid near you. He might be enjoying a lot, but in case of a shunt, you are guilty.

Being Overtaken

First of all keep a strong vigil on the rearview mirrors. If anybody is trying to overtake, let him do it or stop him before by speeding or warning him of oncoming traffic. But at no time speed up to show who's boss! In fact if the guy has made a mistake by pulling out on the wrong lane and its too late for him to back off, reduce your speed and let him come into the lane.

Crossing railway tracks

On a manned railway crossing always make sure you stick to your lane. Although the queue ahead is a mile long, if you pull out on the wrong lane, oncoming traffic will be blocked causing a massive snarl.

When you connect with the road, you should be able to hold on to it.
